SAND SIZING SYSTEMS

Numerous midwestern and southern industrial sand producers have installed modular dry sizing systems for plants with feed rates ranging from 30 STPH to over 300 STPH. Over 125 High Speed (3600 RPM), Model K48-120A screening machines have been installed since 1980 to separate nominal 6 mesh by 140 mesh sand into either direct shipment or closely sized blend products for the frac, foundry, blast and glass industries.

(See schematic on reverse side.)

Fitted with PATENTED "Sandwich Screen®" sizing surfaces, these screening units have consistently performed beyond expectations with minimal blinding or mechanical maintenance. Screening costs well below 1¢/ton are common with some fine 40 to 60 mesh panels lasting in excess of 2,000-3,000 hours.
